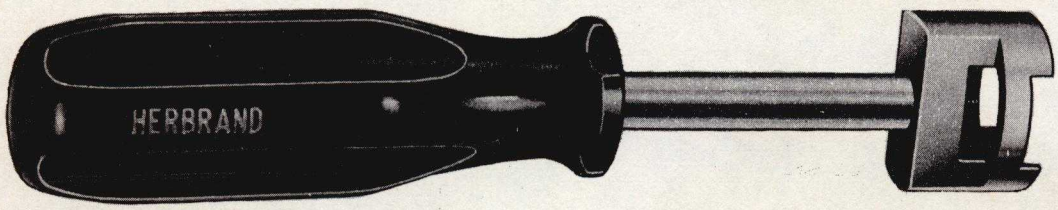
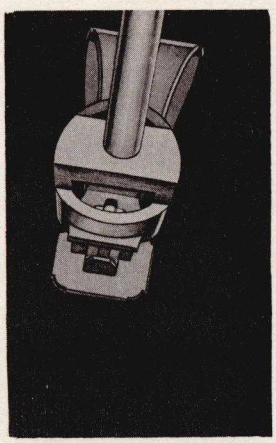
TOOL OF THE MONTH - MARCH

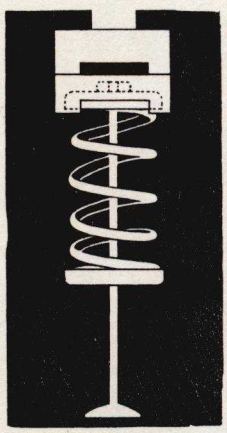
No. 265 Brake Shoe Retaining Spring Tool





Remove, Install Hair-Pin Type Brake Shoe Retaining Springs

Remove, Install Coil-Type Brake Shoe Retaining Springs



The March Tool-of-the-Month is another Herbrand Special Tool that features TWO TOOLS IN ONE.

No. 265 not only is Herbrand engineered to remove and install coil type brake retainer springs, but has the added feature of being the only brake shoe retaining spring tool that will also remove and install leaf or "hairpin" type brake shoe retaining springs used on some Chevrolets.

Operation is simple -- for coil type brake shoe spring removal, just push tool on spring, compress spring and make a quarter turn. To remove and install "hairpin" type brake shoe springs, slip slotted end of tool over leaf as illustrated, compress spring, and make one quarter turn.

The 265 Brake Shoe Retaining Spring Tool is built with an observation window to let the mechanic see when the spring retainer is fully seated -- no guessing, no lost time.

The 265 Brake Shoe Retaining Spring Tool is an absolute must for service stations who want to do more fast, easy, profitable brake jobs.

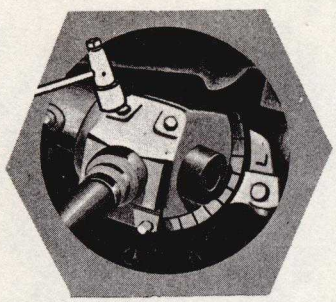
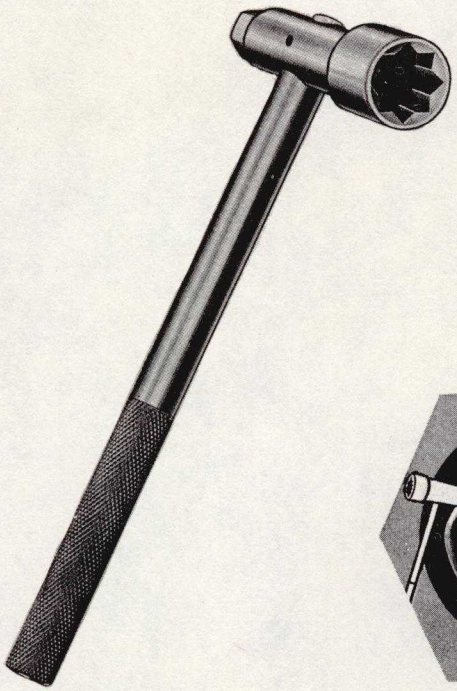
TOOL OF THE MONTH - MAY

Corvair - Valiant Differential Filler Plug Tool

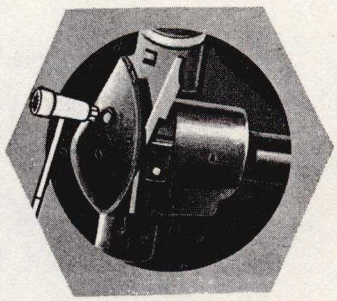


CORVAIR



NO. 199

VALIANT



Herbrand's May Tool-of-the-Month is a combination of two tools in one designed to speed up removing and replacing differential filler plugs on the Corvair and Valiant compact cars.

The socket end of the No. 199 is built to length, with an eight point socket specially designed for the Corvair differential filler plug.

The 1/2" hex end of the No. 199 fits perfectly into the female differential filler plug on the Valiant.

The No. 199 Corvair - Valiant Differential Filler Plug Tool will save mechanics time and money -- produce more profit for service stations servicing the new compact cars.

TOOL OF THE MONTH - JULY

UNIVERSAL BENDIX BRAKE ADJUSTER

No. 300

The new Herbrand #300 Universal Bendix Brake Adjuster is the first tool specifically engineered to adjust all Bendix type brakes, including the new 1960 Buicks, Chevrolets, and Corvairs.

The STANDARD end is used for all ordinary Bendix Brake adjustments. The MODIFIED end is required when adjusting brakes on the Corvair, Chevrolet, and Buick.

The #300 Universal Bendix Brake Adjuster solves the problem of needing multiple brake adjusting tools in the service station or repair garage, and is a necessity for adjusting brakes on the 1960 Buicks, Chevrolets, and Corvairs.

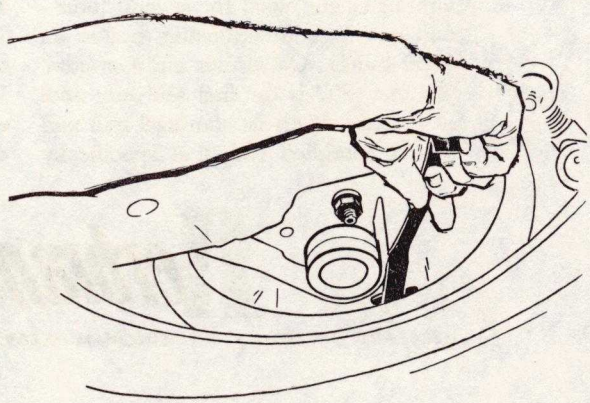

Illustration shows how modified end of the #300 Universal Bendix Brake Adjuster permits quick, easy adjustment of brakes on 1960 Corvairs, Chevrolets, and Buicks.

Nationally Advertised Tools!

A way to adjust *all* Bendix Brakes that eliminates the need for several tools—and is a *must* for adjusting brakes on 1960 Buicks, Chevrolets and Corvairs! The No. 300 is the first and only tool of its type. With its standard end and second modified end, it is specifically engineered to make it a truly universal Bendix tool. The modified end is specially designed to clear the lower control arm of the ball-joint suspension. The tool reaches blind locations with ease and provides lots of leverage in close quarters. TOOL OF THE MONTH - SEPTEMBER

No. 2110 "SNAP GAP" POINT SETTING TOOL

Place ring over cam.

Use gauge and adapter to set.

Herbrand's September Tool - of - the-Month, the #2110 Snap Gap Point Setting Tool, enables mechanics to set distributor points accurately and quickly without rotating the engine or removing the distributor.

The #2110 Snap Gap Point Setting Tool is easy to use:

1. Remove distributor cap and rotor.
2. Slide precision ring over cam.
3. Insert feeler gauge between points.
4. Adjust and tighten points.

The complete tool includes five precision made cam rings, and special feeler gauge packed in a durable case with specifications and instructions.

This new tool is accurate, easy to use, and quick. It is a time-saving necessity for car dealers, repair shops, and service station tune-up operations.

TOOL OF THE MONTH - NOVEMBER

MASTER BRAKE BLEEDER WRENCH

COVERS CONVENTIONAL CARS, COMPACTS AND TRUCKS

A must tool for every service station and garage. It's actually two tools in one, with a 1/4" hex socket opening to cover compact car bleeder valves, plus a 3/8" hex for conventional cars and trucks.

Aside from covering "all three", this special Herbrand tool also has another advantage. It has special vent holes in each socket end, which permit bleeding the line without removal of the wrench from the bleeder valve. The No. 270 will take real punishment, too. It is hot forged of tough alloy steel and each socket end is broached within exceptionally close tolerances. Bright finish all over.

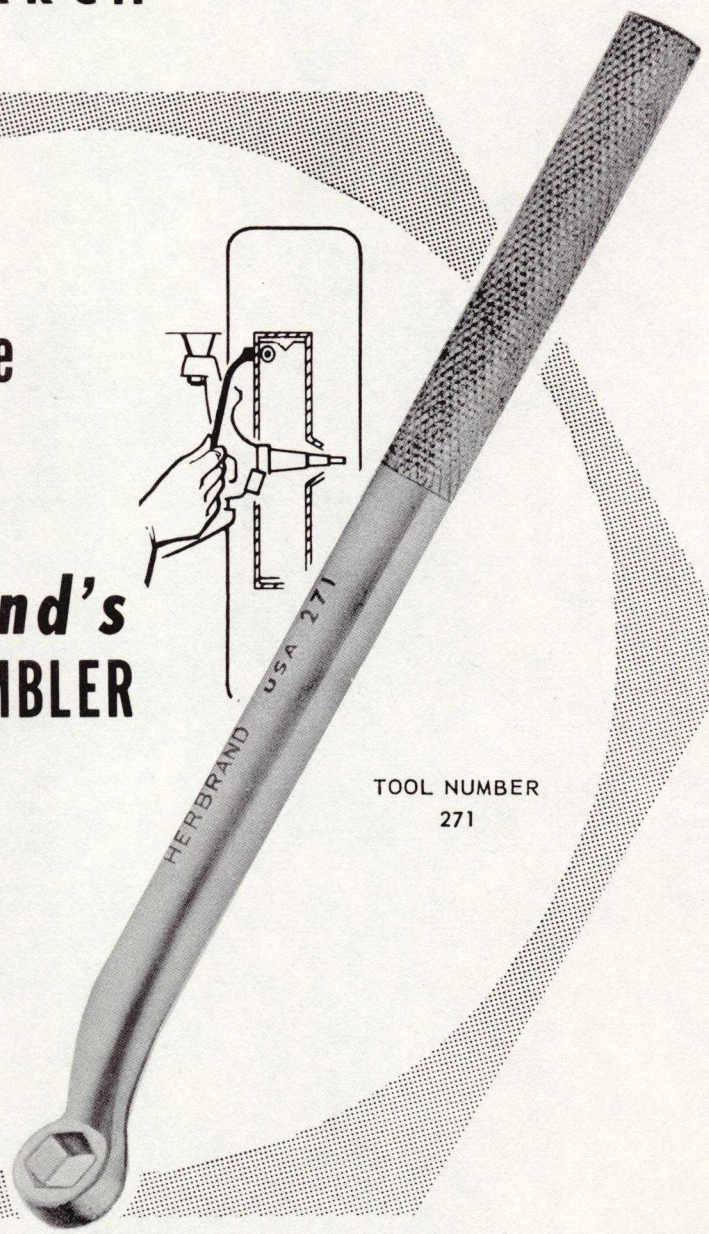
no clearance problem with *Herbrand's* NEW RAMBLER BRAKE BLEEDER WRENCH



TOOL NUMBER
271

Designed to eliminate clearance problems in bleeding front brakes on the Rambler, this new tool slips into place easily in the tight space between the bleeder valve nut and steering knuckle. Because of its ¼" hex opening, the 271 Brake Bleeder Wrench can also be used on Valiant, Corvair, Lark, Comet, Falcon and Lancer. One tool to service over 90% of the compacts! The tool comes in a bright finish with knurled handle. Ask your warehouse distributor.
